PROFILE OVERVIEW

Senior Full-Stack Software Engineer with **4+ years of production experience** building, debugging and evolving complete applications across the stack: **React, Next.js, Vue.js and TypeScript** front-ends; **Java/Spring Boot, Quarkus, Python and Node.js** services; SQL/NoSQL persistence; Kafka event streams; and Docker, Kubernetes, Azure and AWS delivery. Currently a **Senior Consultant at Systems Limited × Confiz** on **Chatterbox**, an AI-enabled US healthcare application. Previously spent four years on **AL-Habib Bank's core-banking platform**, leading a 4-member team and shipping regulated, high-availability microservices, Trade Finance and Teller modules. Independently built and launched **three live multi-LLM products**, works daily with AI coding agents, and rigorously reviews generated code for correctness, security, performance and maintainability. **micro1-certified Senior Software Design Engineer** (system design and distributed architecture).

CORE STRENGTHS

- **End-to-End Full-Stack Delivery:** Ships user-facing features together with the APIs, services and data models behind them – from React/Next.js/Vue UI state to Spring Boot, Python and Node.js services and relational schemas.
- **Multi-Language Production Experience:** Java, TypeScript/JavaScript and Python in production, with earlier C#/ASP.NET MVC; comfortable reading, porting and re-implementing logic across language ecosystems.
- **Unfamiliar Codebases:** Ramps quickly onto large existing repositories – enterprise core-banking microservices and a healthcare BFF / AI Search codebase – by mapping architecture, request flows and API contracts before changing code.
- **Systematic Debugging:** Traces requests and data across browser, front-end state, BFF, services, message brokers, databases and deployments to isolate root causes in state, API contracts, authentication, persistence, networking and configuration.
- **AI-Generated Code Evaluation:** Hands-on daily use of AI coding agents (Claude Code, Cline) and multi-LLM APIs; reviews and hardens AI output for correctness, completeness, performance, security and maintainability.

TECHNICAL SKILLS

Languages: Java, TypeScript, JavaScript (ES6+), Python, SQL, C#, HTML5, CSS3

Frontend: React 19, Next.js, Vite, Vue.js, XState, Tailwind CSS, Recharts, responsive UI, application state management

Backend & APIs: Spring Boot, Quarkus, Node.js, Express.js, Flask, REST API design, API contracts, BFF pattern, Microservices

Data & Messaging: PostgreSQL, MySQL, MongoDB, Advanced SQL, Spring Data JPA, Hibernate, Apache Kafka (event-driven)

Cloud & DevOps: Azure, AWS, Docker, Kubernetes, CI/CD, GitHub Actions, Maven, Git, Vercel, serverless APIs

AI / LLM: OpenAI, Gemini, Groq, Ollama, multi-LLM routing, RAG pipelines, prompt engineering, local models, AI code review

Testing & Quality: JUnit, Mockito, Jest, integration testing, TDD, code reviews, root-cause analysis, Agile/Scrum

PROFESSIONAL EXPERIENCE

Senior Consultant – Application Development (Java Full-Stack)

Aug 2026 – Present

Systems Limited × Confiz (SL Americas) | Project: Chatterbox (US Healthcare, AI-Enabled) — *Karachi, Pakistan*

- Contribute full-stack features to **Chatterbox**, an AI-enabled application for a US healthcare client, spanning **Java/Spring Boot and Python** back-end services and **React, Next.js and Vite** front-ends.
- Develop and debug UI for the **AI Search** and **Tech AI** modules, wiring components to back-end endpoints and handling loading, error and application-state edge cases for AI-driven responses.
- Onboarded onto an existing **Backend-for-Frontend (BFF)** codebase built by another engineer – mapped request flows, API contracts and downstream service dependencies before shipping changes.
- Trace defects end-to-end from browser to BFF, Spring Boot/Python services and data layer; deliver through **Azure, Docker and CI/CD pipelines** in Agile sprints with a distributed onshore/offshore team.

Senior Software Design Engineer

Jul 2022 – Jul 2026

TereSol Pvt. Ltd. | Client: AL-Habib Bank – Core Banking Platform — *Karachi, Pakistan*

- Led a **4-member engineering team** building a production core-banking platform; mentored junior engineers, reviewed code and contributed to architecture discussions, estimation and sprint planning.
- Designed and delivered REST APIs across **10+ distributed microservices** using Java, Spring Boot and Quarkus, with **Apache Kafka** for event-driven communication and **Kubernetes** for container orchestration.

- Owned **Vue.js + XState** front-end modules for complex banking state machines, delivering full-stack features from UI state transitions and validation through APIs to SQL persistence.
- Architected and delivered **4+ Trade Finance import/export modules** supporting thousands of daily cross-border transactions under **State Bank of Pakistan** regulatory requirements.
- Delivered **3 production Teller Module capabilities**, including outward bill clearing and credit-card fund transfers, used across nationwide bank branches.
- Automated transaction-reconciliation workflows, reducing daily financial-close processing **from hours to minutes** while improving accuracy and traceability.
- Diagnosed and resolved production issues spanning UI state, API contracts, Kafka event flows, SQL persistence and Kubernetes deployments in a high-availability, regulated environment.

  Environment: Java, Spring Boot, Quarkus, Spring Data JPA, Hibernate, Kafka, Kubernetes, Docker, Vue.js, XState, Node.js, MySQL, AWS, Maven, JUnit, Mockito

Web Design Intern
Jun 2021 – Aug 2021

Abtach Pvt. Ltd. — *Karachi, Pakistan*

- Built 10+ responsive HTML5/CSS3/JavaScript interfaces from Figma wireframes with cross-browser and cross-device testing.

C# Developer (Trainee)
Jan 2021 – May 2021

Media Monitors — *Karachi, Pakistan*

- Built 5+ ASP.NET MVC (C#) modules across controllers, data processing and reporting; optimized data-parsing routines, improving report-generation speed by an estimated 30%.

SELECTED PROJECTS

FakeShield – Multimodal AI Misinformation & Deepfake Detection
Live | GitHub

- Re-architected a Python/Flask LSTM/CNN fake-news model (40,000+ articles, 92%+ accuracy) into a full-stack product: React 19 + TypeScript client, serverless Node.js/Express API and Python analysis for voice-clone and image-deepfake detection.
- Implemented multi-provider AI routing (Gemini, Groq, Ollama) unifying text, URL, image, audio and video analysis.

  Tech: Node.js, Express.js, React 19, TypeScript, Python, Gemini, Groq, Ollama, Serverless APIs, Vercel

LendLedger – Full-Stack AI Financial Ledger
Live | GitHub

- Built a Java Spring Boot REST API with Spring Data JPA/Hibernate over PostgreSQL/MySQL and a typed React 19 + TypeScript client with Tailwind CSS and Recharts dashboards for balances and payment activity.
- Integrated Gemini-powered payment reminders, monthly summaries and risk assessments with PDF export, keeping clear separation between API, persistence, AI-integration and presentation layers.

  Tech: Java, Spring Boot, JPA/Hibernate, PostgreSQL, MySQL, React 19, TypeScript, Tailwind CSS, Gemini API, Vercel

Zynapse – AI Engineering Academy (Web + Windows Desktop App)
Live | GitHub

- Shipped a React 19 + TypeScript + Express.js learning platform with multi-LLM routing across Groq, Gemini and OpenAI, provider health checks, and an offline Ollama/Gemma 2B fallback that runs without external API keys.
- Packaged it as a native Windows installer (Electron + NSIS) alongside browser distribution, with one-click PDF export.

  Tech: React 19, TypeScript, Express.js, Electron, NSIS, Groq, Gemini, OpenAI, Ollama

EDUCATION

B.Sc. in Computer Science
2018 – 2022

Sindh Madressatul Islam University (SMIU) — *Karachi, Pakistan*

- Final Year Project: Fake News Detector – LSTM/CNN pipeline trained on 40,000+ articles (92%+ accuracy) served via a Flask REST API; later evolved into FakeShield.

CERTIFICATIONS

Senior Software Design Engineer – micro1 — **Apr 2026**

Passed a multi-stage AI-led interview on system design and distributed architecture plus a timed hands-on coding assessment.

SQL (Advanced) and **Problem Solving (Intermediate)** – HackerRank — **2024**

Java & Data Structures and Algorithms – Apna College — **Nov 2024 – Feb 2025**

ADDITIONAL INFORMATION

- **Availability:** Flexible remote hours, including weekends, with US/EU time-zone overlap.
- **Competitive Programming:** Algorithmic problem solving on LeetCode and HackerRank (DSA, SQL).
